

Focusun Marine Used Seawater Fake Ice Machine

Focusun land used seawater flake ice machine is mainly suitable for coastal areas, and it directly uses seawater to produce ice whose salt content is much higher than that of the ice made by the fresh water flake ice making machine. Due to the particularity of inlet water, the pipe of land used seawater ice flake making plant usually adopts special anti-corrosion materials. Focusun mainly manufacture the flake ice maker with daily capacity larger than five tons. And a number of different daily capacity models are available.

Designed in accordance with the certification standards of shipping, equipped with Bitzer semi-hermetic piston compressors with deepened oil tank and marine used seawater condenser, Focusun land used seawater flake ice machinery wins excellent reputation among customers all around the world.
